

JITTR NETWORKS TO EXPAND SILICON VALLEY OPERATIONS

San Jose, CA – 15 December 2006 – Jittr Networks, providers of Instant-On, Full-Screen, HD Quality streaming video, announced today plans to expand its development and operations center in Silicon Valley. The company will hire experts in video streaming, high-availability network-based services, Internet advertising and related video on demand skill sets.

“Our foundational technology has had more than two years of development,” said Elie Habib, Jittr Networks’ President and CEO. “We are now ready to move from technology to operating service. Our current plans are to build our network during the early part of the year and have controlled deployments in the fourth quarter of 2007. There is tremendous demand for a commercial-grade video delivery service using the standard Internet. People’s viewing habits are already changing. But the current offerings have very high cost and low quality. We intend to flip that equation and give the media industry high quality at a lower price point.”

Actively Hiring:

Jittr Networks is actively hiring streaming video and network service experts. There are open positions for the following skills:

- Video Streaming Engineers
- Client Software and Video Player Engineers
- Network Architects
- Content Management Experts
- Web 2.0 Programmers and Designers
- Internet Advertising Developers
- Network Services Business Development
- Software and Services Quality Engineers

About Jittr Networks

Jittr Networks provides an advanced, end-to-end video distribution service that radically improves the user experience for streaming Internet video. Our customers include content and digital media providers and content delivery networks who need to offer high-definition and mixed media to large populations of end-users. The Jittr Networks’ streaming video delivery service is based on cutting-edge technology, including our own proprietary algorithms, protocols and software. Our unique high-definition and instant on video service provides an end-user experience second to none, and enables new Internet-based business models based on advertising, subscription services, pay-per-view with full DRM, syndication and new hybrid revenue models.
